Chemistry and Physics of Lipids, 51 (1989) 285—288
Elsevier Scientific Publishers Ireland Ltd.

Subject Index

Volume 51 (1989)

acylCoA cholesterol acyltransferase, rat liver microsomes, bile acids, cholesterol 7α-hydroxylase, HMG-CoA reductase, 119
aging, dolichol, membrane, fluidity, lipids, 219
n-alcohol, nuclear magnetic resonance, phospholipid, Triton X-100, phase transition, vesicular permeability, 55
N-alkylanthracyclines, lipid bilayers, differential scanning calorimetry, curve fitting analysis, 105
allylic alcohol, epoxy acid, steric analysis, gas-liquid chromatography, 15

bilayer lipid membrane, polyisoprenols, phosphopolyisoprenols, dolichyl phosphate, voltammetric analysis, 227
bile acids, rat liver microsomes, cholesterol 7α--hydroxylase, HMG-CoA reductase, acylCoA cholesterol acyltransferase, 119

C6D6, solution, polyprenols, triad sequence, ^{1}H-NMR, methyl proton signals, 183
calcium channel blocking drugs, lipid phase transition, phosphatidylcholine, differential scanning calorimetry, 1
cellular processes, enzymic reactions, polyisoprenoids, specificity, 249
cerebrosides, sulfatide, myelin basic protein, membrane fusion, membrane interactions, myelin stability, 127
characterization, dolichyl diphosphate phosphatase, rat liver, 279
cholesterol, rat liver isoprenoids, dolichol, dolichyl phosphate, 261
cholesterol 7α-hydroxylase, rat liver microsomes, bile acids, HMG-CoA reductase, acylCoA cholesterol acyltransferase, 119
circular dichroism active liposomes, circular dichroism active phospholipid, lipid-protein interaction, melittin, lipid transfer, 83
circular dichroism active phospholipid, circular dichroism active liposomes, lipid-protein interaction, melittin, lipid transfer, 83
cord factor, mycobacteria, glycolipids, galactosyl galactoside, 9
corynebacteria, mycolic acids, mycobacteria, mass spectrometry, negative ions, remote site fragmentation, 31
crosslinking, phosphatidylethanolamine, HPLC, thin-layer chromatography, membrane structure, 39
curve fitting analysis, *N*-alkylanthracyclines, lipid bilayers, differential scanning calorimetry, 105

differential scanning calorimetry, lipid phase transition, phosphatidylcholine, calcium channel blocking drugs, 1
differential scanning calorimetry, *N*- alkylanthracyclines, lipid bilayers, curve fitting analysis, 105
differential scanning calorimetry, glycosaminoglycans, divalent cations, phospholipids, 67
dimyristolyphosphatidylcholine, quasielastic light scattering, infrared spectroscopy, large unilamellar vesicles, loperamide, phase transition, opiate compound, 75
divalent cations, glycosaminoglycans, phospholipids, differential scanning calorimetry, 67
dolichol, dolichol phosphate, polyprenol, polyisoprenoids, metabolic labelling, tritiated water, 269
dolichol, membrane, fluidity, aging, lipids, 219
dolichol, rat liver isoprenoids, cholesterol, dolichyl phosphate, 261
dolichols, polyprenols, isoprenes, nuclear magnetic resonance, 159
dolichol phosphate, dolichol, polyprenol, polyisoprenoids, metabolic labelling, tritiated water, 269
dolichol undecaprenol, nuclear magnetic resonance, polyisoprenols, membrane, models, 205
dolichyl diphosphate phosphatase, rat liver, characterization, 279
dolichyl intermediates, microsomes, hen oviduct, microsomes, rat liver, glycoprotein biosynthesis, 239
dolichyl phosphate, polyisoprenols, phosphopolyisoprenols, bilayer lipid membrane, voltammetric analysis, 227
dolichyl phosphate, rat liver isoprenoids, cholesterol, dolichol, 261
dolichyl phosphate, vesicles, phosphatidylethanolamine, phosphatidylcholine, membrane destabilization, 213

electron paramagnetic resonance, glycophorin, phospholipid vesicles, reconstitution, lipid-protein interaction, 91
enzymic reactions, cellular processes, polyisoprenoids, specificity, 249
epoxy acid, allylic alcohol, steric analysis, gas-liquid chromatography, 15

fluidity, dolichol, membrane, aging, lipids, 219
fluorescent lipid, phase fluorometry, phosphatidylethanolamine, phosphatidylcholine, non-bilayer phases, lipid transitions, 137

galactosyl galactoside, mycobacteria, glycolipids, cord factor, 9

gas-liquid chromatography, epoxy acid, allylic alcohol, steric analysis, 15
glycolipids, mycobacteria, cord factor, galactosyl galactoside, 9
glycophorin, phospholipid vesicles, reconstitution, lipid-protein interaction, electron paramagnetic resonance, 91
glycoprotein biosynthesis, microsomes, hen oviduct, microsomes, rat liver, dolichyl intermediates, 239
glycosaminoglycans, divalent cations, phospholipids, differential scanning calorimetry, 67

high-pressure DTA, oleic acid, polymorphic transition, pressure effect, volume change, 47
HMG-CoA reductase, rat liver microsomes, bile acids, cholesterol 7α-hydroxylase, acylCoA cholesterol acyltransferase, 119
HPLC, phosphatidylethanolamine, crosslinking, thin-layer chromatography, membrane structure, 39

infrared spectra, phosphatidylcholine, water, phase transition, polar head, transition enthalpy, multilamellar dispersion, 23
infrared spectroscopy, quasielastic light scattering, large unilamellar vesicles, dimyristolyphosphatidylcholine, loperamide, phase transition, opiate compound, 75
isoprenes, dolichols, polyprenols, nuclear magnetic resonance, 159

large unilamellar vesicles, quasielastic light scattering, infrared spectroscopy, dimyristolyphosphatidylcholine, loperamide, phase transition, opiate compound, 75
lipid-protein interaction, circular dichroism active phospholipid, circular dichroism active liposomes, melittin, lipid transfer, 83
lipid-protein interaction, glycophorin, phospholipid vesicles, reconstitution, electron paramagnetic resonance, 91
lipids, dolichol, membrane, fluidity, aging, 219
lipid bilayers, *N*-alkylanthracyclines, differential scanning calorimetry, curve fitting analysis, 105
lipid low-molecular weight bioregulators, polyprenols and dolichols, synthesis, 147
lipid phase transition, phosphatidylcholine, calcium channel blocking drugs, differential scanning calorimetry, 1
lipid transfer, circular dichroism active phospholipid, circular dichroism active liposomes, lipid-protein interaction, melittin, 83
lipid transitions, fluorescent lipid, phase fluorometry, phosphatidylethanolamine, phosphatidylcholine, non-bilayer phases, 137
loperamide, quasielastic light scattering, infrared spectroscopy, large unilamellar vesicles, dimyristolyphosphatidylcholine, phase transition, opiate compound, 75

mammalian dolichols, synthesis, plant polyprenols, 171
mass spectrometry, mycolic acids, mycobacteria, corynebacteria, negative ions, remote site fragmentation, 31
melittin, circular dichroism active phospholipid, circular dichroism active liposomes, lipid-protein interaction, lipid transfer, 83
membrane, dolichol, fluidity, aging, lipids, 219
membrane, nuclear magnetic resonance, polyisoprenols, dolichol undecaprenol, models, 205
membrane destabilization, dolichyl phosphate, vesicles, phosphatidylethanolamine, phosphatidylcholine, 213
membrane fusion, sulfatide, cerebrosides, myelin basic protein, membrane interactions, myelin stability, 127
membrane interactions, sulfatide, cerebrosides, myelin basic protein, membrane fusion, myelin stability, 127
membrane structure, phosphatidylethanolamine, crosslinking, HPLC, thin-layer chromatography, 39
metabolic labelling, dolichol, dolichol phosphate, polyprenol, polyisoprenoids, tritiated water, 269
methyl proton signals, polyprenols, triad sequence, ^{1}H-NMR, C6D6, solution, 182
microsomes, hen oviduct, microsomes, rat liver, dolichyl intermediates, glycoprotein biosynthesis, 239
microsomes, rat liver, microsomes, hen oviduct, dolichyl intermediates, glycoprotein biosynthesis, 239
models, nuclear magnetic resonance, polyisoprenols, dolichol undecaprenol, membrane, 205
multilamellar dispersion, phosphatidylcholine, water, phase transition, infrared spectra, polar head, transition enthalpy, 23
mycobacteria, glycolipids, cord factor, galactosyl galactoside, 9
mycobacteria, mycolic acids, corynebacteria, mass spectrometry, negative ions, remote site fragmentation, 31
mycolic acids, mycobacteria, corynebacteria, mass spectrometry, negative ions, remote site fragmentation, 31
myelin basic protein, sulfatide, cerebrosides, membrane fusion, membrane interactions, myelin stability, 127
myelin stability, sulfatide, cerebrosides, myelin basic protein, membrane fusion, membrane interactions, 127

negative ions, mycolic acids, mycobacteria, corynebacteria, mass spectrometry, remote site fragmentation, 31
^{1}H-NMR, polyprenols, triad sequence, C6D6, solution, methyl proton signals, 182
non-bilayer phases, fluorescent lipid, phase fluorometry, phosphatidylethanolamine, phosphatidylcholine, lipid transitions, 137
nuclear magnetic resonance, dolichols, polyprenols, isoprenes, 159
nuclear magnetic resonance, phospholipid, *n*-alcohol, Triton X-100, phase transition, vesicular permeability, 55
nuclear magnetic resonance, polyisoprenols, dolichol undecaprenol, membrane, models, 205

oleic acid, polymorphic transition, pressure effect, volume change, high-pressure DTA, 47
opiate compound, quasielastic light scattering, infrared spectroscopy, large unilamellar vesicles, dimyristoly-

phosphatidylcholine, loperamide, phase transition, 75
O specific polysaccharide, prenyl phosphates, phosphorylation, *Salmonella anatum,* specificity of enzymes, 191

phase fluorometry, fluorescent lipid, phosphatidylethanolamine, phosphatidylcholine, non-bilayer phases, lipid transitions, 137
phase transition, nuclear magnetic resonance, phospholipid, *n*-alcohol, Triton X-100, vesicular permeability, 55
phase transition, phosphatidylcholine, water, infrared spectra, polar head, transition enthalpy, multilamellar dispersion, 23
phase transition, quasielastic light scattering, infrared spectroscopy, large unilamellar vesicles, dimyristolyphosphatidylcholine, loperamide, opiate compound, 75
phosphatidylcholine, dolichyl phosphate, vesicles, phosphatidylethanolamine, membrane destabilization, 213
phosphatidylcholine, fluorescent lipid, phase fluorometry, phosphatidylethanolamine, non-bilayer phases, lipid transitions, 137
phosphatidylcholine, lipid phase transition, calcium channel blocking drugs, differential scanning calorimetry, 1
phosphatidylcholine, water, phase transition, infrared spectra, polar head, transition enthalpy, multilamellar dispersion, 23
phosphatidylethanolamine, crosslinking, HPLC, thin-layer chromatography, membrane structure, 39
phosphatidylethanolamine, dolichyl phosphate, vesicles, phosphatidylcholine, membrane destabilization, 213
phosphatidylethanolamine, fluorescent lipid, phase fluorometry, phosphatidylcholine, non-bilayer phases, lipid transitions, 137
phospholipid, nuclear magnetic resonance, *n*-alcohol, Triton X-100, phase transition, vesicular permeability, 55
phospholipids, glycosaminoglycans, divalent cations, differential scanning calorimetry, 67
phospholipid vesicles, glycophorin, reconstitution, lipid-protein interaction, electron paramagnetic resonance, 91
phosphopolyisoprenols, polyisoprenols, dolichyl phosphate, bilayer lipid membrane, voltammetric analysis, 227
phosphorylation, prenyl phosphates, *Salmonella anatum,* O specific polysaccharide, specificity of enzymes, 191
plant polyprenols, synthesis, mammalian dolichols, 171
polar head, phosphatidylcholine, water, phase transition, infrared spectra, transition enthalpy, multilamellar dispersion, 23
polyprenol, dolichol, dolichol phosphate, polyisoprenoids, metabolic labelling, tritiated water, 269
polyisoprenoids, cellular processes, enzymic reactions, specificity, 249
polyisoprenoids, dolichol, dolichol phosphate, polyprenol, metabolic labelling, tritiated water, 269
polyisoprenols, nuclear magnetic resonance, dolichol undecaprenol, membrane, models, 205
polyisoprenols, phosphopolyisoprenols, dolichyl phosphate, bilayer lipid membrane, voltammetric analysis, 227
polymorphic transition, oleic acid, pressure effect, volume change, high-pressure DTA, 47
polyprenols, dolichols, isoprenes, nuclear magnetic resonance, 159
polyprenols, triad sequence, ^{1}H-NMR, C6D6, solution, methyl proton signals, 182
polyprenols and dolichols, lipid low-molecular weight bioregulators, synthesis, 147
prenyl phosphates, phosphorylation, *Salmonella anatum,* O specific polysaccharide, specificity of enzymes, 191
pressure effect, oleic acid, polymorphic transition, volume change, high-pressure DTA, 47

quasielastic light scattering, infrared spectroscopy, large unilamellar vesicles, dimyristolyphosphatidylcholine, loperamide, phase transition, opiate compound, 75

rat liver, dolichyl diphosphate phosphatase, characterization, 279
rat liver isoprenoids, cholesterol, dolichol, dolichyl phosphate, 261
rat liver microsomes, bile acids, cholesterol 7α--hydroxylase, HMG-CoA reductase, acylCoA cholesterol acyltransferase, 119
reconstitution, glycophorin, phospholipid vesicles, lipid-protein interaction, electron paramagnetic resonance, 91
remote site fragmentation, mycolic acids, mycobacteria, corynebacteria, mass spectrometry, negative ions, 31

Salmonella anatum, prenyl phosphates, phosphorylation, O specific polysaccharide, specificity of enzymes, 191
specificity, cellular processes, enzymic reactions, polyisoprenoids, 249
specificity of enzymes, prenyl phosphates, phosphorylation, *Salmonella anatum,* O specific polysaccharide, 191
steric analysis, epoxy acid, allylic alcohol, gas-liquid chromatography, 15
sulfatide, cerebrosides, myelin basic protein, membrane fusion, membrane interactions, myelin stability, 127
synthesis, lipid low-molecular weight bioregulators, polyprenols and dolichols, 147
synthesis, mammalian dolichols, plant polyprenols, 171

thin-layer chromatography, phosphatidylethanolamine, crosslinking, HPLC, membrane structure, 39
transition enthalpy, phosphatidylcholine, water, phase transition, infrared spectra, polar head, multilamellar dispersion, 23
triad sequence, polyprenols, ^{1}H-NMR, C6D6, solution, methyl proton signals, 182
tritiated water, dolichol, dolichol phosphate, polyprenol, polyisoprenoids, metabolic labelling, 269
Triton X-100, nuclear magnetic resonance, phospholipid, *n*-alcohol, phase transition, vesicular permeability, 55

vesicles, dolichyl phosphate, phosphatidylethanolamine, phosphatidylcholine, membrane destabilization, 213
vesicular permeability, nuclear magnetic resonance, phospholipid, *n*-alcohol, Triton X-100, phase transition, 55
voltammetric analysis, polyisoprenols, phosphopolyisoprenols, dolichyl phosphate, bilayer lipid membrane, 227
volume change, oleic acid, polymorphic transition, pressure effect, high-pressure DTA, 47
water, phosphatidylcholine, phase transition, infrared spectra, polar head, transition enthalpy, multilamellar dispersion, 23
